

# Demonstration-Guided Reinforcement Learning with Efficient Exploration for Task Automation of Surgical Robot

Tao Huang, Kai Chen, Bin Li, Yun-Hui Liu, Qi Dou  
The Chinese University of Hong Kong

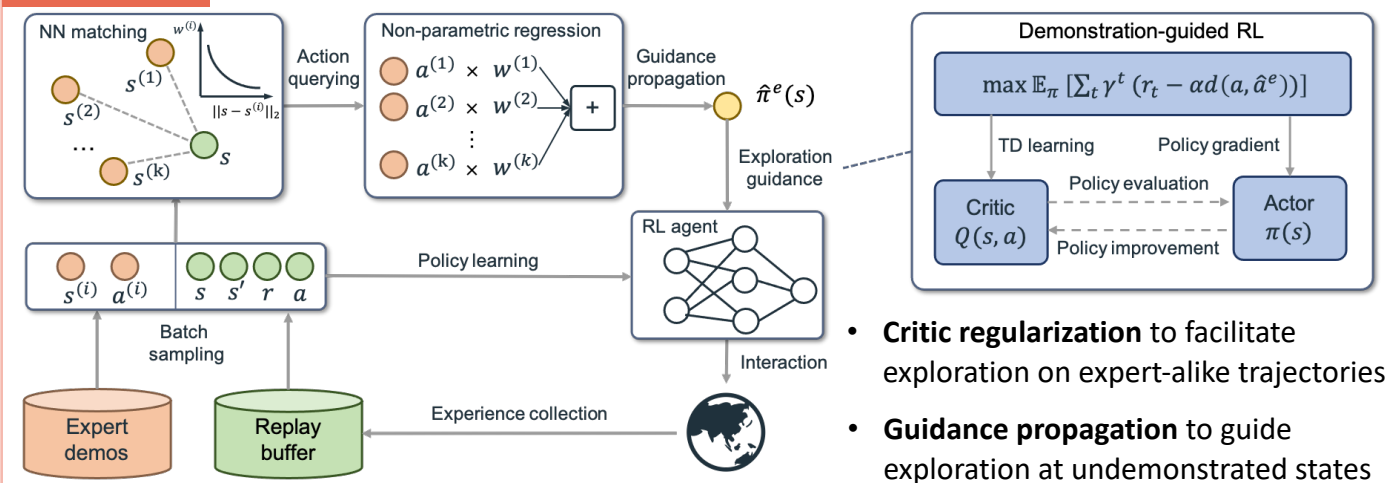

## Background

- Reinforcement learning faces with exploration challenge in task automation of surgical robot
- Demonstration data can accelerate exploration, but how to make effective use of it remains an open problem

## Method

- Critic regularization** to facilitate exploration on expert-alike trajectories
- Guidance propagation** to guide exploration at undemonstrated states

## Main Results

Task Description		Reinforcement Learning		Imitation Learning			Demonstration-guided Reinforcement Learning				Ours

- Our method significantly outperforms prior RL-based approaches on the surgical robot learning tasks from SurRoL, especially on complex bi-manual tasks

## Ablation

- Ablation on model components

- Ablation on demonstration amount

## Robot Evaluation

- Trajectories deployed on real dVRK platform

- Robot experiments on real-world tasks
